

# Prestashop XML Feeds Pro module

This “XML Feeds Pro” module generates “Prestashop” products, orders, customers, brands, suppliers, and categories XML feeds. With this module, you can share your database with other systems.

By default, our module has compatibility with Google Shopping (Merchant Center), Facebook Marketing API, Bing / Microsoft, Siroop, Skroutz, Bestprice.gr, Xikixi, Fruugo, ManoMano, Shoptet, Beslist, Prisjakt, Heureka, PriceRunner, Spartoo, Mall, Twenga, idealo, Drezzy, Trovaprezzi, Ceneo, and much more (if you need compatibility with another partner – please contact us).

Of course, if you want, you can always change the settings by yourself and create a custom XML feed. Our module will provide a lot of flexibility with XML structure, data filters.

If you have any questions, please contact us via Prestashop Messenger:

[https://addons.prestashop.com/en/contact-us?id\\_product=5732](https://addons.prestashop.com/en/contact-us?id_product=5732)

## Install instruction

The installation of the module is very simple. Login to the Prestashop admin panel, click on the “Modules” tab. Then, click on the “Add a new module” link and upload the “XML Feeds Pro” module. After this, just click on the “Install” button and you are done.

## Uninstall instruction

Just click the “uninstall” button on the Prestashop admin panel/modules.

## Video review of the “XML Feeds Pro” module

Our module intro video is the fastest and easiest way to understand the possibilities of the module. So we strongly recommend it.

## Frequently asked questions

- How to create a new XML feed?
- Can I generate an XML file with cron?
- How to display all product images?
- How to display each product combination as a separate product?
- How to display partner categories in an XML feed (category mapping)?
- How can I create affiliate prices?
- How can I modify product prices?
- How can I export only certain products (filter)?
- How to display XML fields at the second level?
- How to rename product attributes/features when they do not match the partner requirements?
- How can I export only certain orders (filter)?
- How to avoid XML escaping special characters (CDATA)?
- How to display product variants for Skroutz?
- How to display merged combinations (size, color as an example) for Skroutz?

## How to create a new XML feed?

Click on the menu item “Add new feed” (step 1).

Here you can find the most popular templates of XML feeds. These templates are already fully prepared for you to use with just one click. If you need, feel free to customize feeds to suit your individual needs. Of course, you can also create your own unique from scratch.

The screenshot displays the 'XML feeds Pro' interface, version 3.12.5. On the left sidebar, under 'XML Feeds', there are three main categories: 'PRODUCT FEEDS', 'CATEGORY FEEDS', and 'ORDER FEEDS'. Under 'PRODUCT FEEDS', several templates are listed with icons for charts, links, and trash: 'Products comb.', 'Facebook', 'Ceneje', 'Vendigo', 'Google', 'Skroutz', 'Vivino', 'Skroutz LIVE', and 'Peach Pal'. At the bottom of this list is a blue button labeled '+ Add new feed', which is highlighted by a red arrow labeled 'Step 1'. Below this are links for 'Affiliate prices', 'Categories mapping', 'Attributes mapping', 'Features mapping', and 'Product list'. Under 'CATEGORY FEEDS', there is a 'Categories' template and another '+ Add new feed' button. The main content area is titled 'Create a new XML feed'. It features a 'Feed name' input field at the top. Below it is a light blue informational box stating: 'Here you can find the most popular XML templates. They are already fully prepared for you to use with just one click. If you need, feel free to customize XML templates to suit your individual needs. Of course, you can also create your own unique from scratch.' Under the heading 'XML structure Most popular templates:', there are two rows of template icons, each with a radio button. The first row includes 'Individual', 'Facebook', 'Google', and 'Skroutz'. The second row includes 'idealo', 'PriceRunner', 'ManoMano', and 'Trovaprezzi'. Below this is a section titled 'Templates by alphabet:' with a search bar labeled 'Search by name'. This section shows a grid of template icons starting with letters like 'A', 'B', 'C', etc., including 'AdRoll', 'alza', 'Ani', and 'Appla'. A red arrow labeled 'Step 2' points from the 'Add new feed' button in the sidebar to the 'Most popular templates' section.

If you did not find the right XML template for you, feel free to contact us via Prestashop

Messenger: [https://addons.prestashop.com/en/contact-us?id\\_product=5732](https://addons.prestashop.com/en/contact-us?id_product=5732)

We'll be very happy to help integrate a new marketplace/channel or just create an individual XML feed according to your requirements.

# Can I generate an XML file with cron?

There are three options for how to execute a cron job. Choose the one that is most convenient for you. The first and most common is run from a server side and the second is called from a remote server.

**1st option:** Install cron from a server command line (shell) or admin panel

1. Execute crontab -e (cron edit page) command
1. 2. In a new line enter the cron command (data will be updated every 2 hours):  
`19 */2 * * * /usr/bin/php -q FULL_PATH/modules/xmlfeeds/api/xml.php 1`
1. 3. Save the cron (Ctrl + X, answer by pressing Y to save changes and Enter to confirm)

**2nd option:** Run cron from URL or a remote server

URL to execute XML feed via cron:

[https://www.mystore.com/module/xmlfeeds/api?id=1&affiliate=affiliate\\_name](https://www.mystore.com/module/xmlfeeds/api?id=1&affiliate=affiliate_name)

**3rd option:** Setup cron with cPanel, Plesk, DirectAdmin, or another server management tool  
After this enable cron and at the XML feed settings page.

P.S. Cron is useful only when you have a lot of products and the server is very slow. Our module can update a feed (products, orders, etc..) automatically by itself without a cron.

## How to display partner categories in an XML feed (category mapping)?

This is called “categories mapping”. You’ll need to indicate which of your categories coincide with the partner category. This is usually required by Google, Facebook, Spartoo, Glami and some others.

The screenshot displays the 'XML feeds Pro' interface (Version: 3.12.5) with three main sections: 'XML Feeds', 'Category map file', and 'Category mapping'.

**XML Feeds Section:**

- PRODUCT FEEDS:** Includes feeds for Products comb., Facebook, Ceneje, Vendigo, Google, Skroutz, Vivino, Skroutz LIVE, and Peach Pal. Each feed has icons for status, refresh, and delete.
- Category mapping:** This section is highlighted with a red arrow labeled 'Step 1'. It contains options for 'Affiliate prices', 'Categories mapping' (selected), 'Attributes mapping', 'Features mapping', and 'Product list'.
- CATEGORY FEEDS:** Includes 'Categories' and an 'Add new feed' button.
- ORDER FEEDS:** Includes 'Orders ALL' and 'Orders, ReadyPRO', each with status, refresh, and delete icons, and an 'Add new feed' button.

**Category map file Section:**

Category map name: [input field] [Choose file] No file chosen

[Show category map file requirement]

[Upload new]

**Category mapping Section:**

Google/Facebook EN [Select]

Delete map file Download map file [UPDATE]

Use category ID instead of name ☐

Please select a category from suggestion list, enter at least 3 letters to display the list. Letters can be from any part of the word.

You can view the full list of [Google/Facebook EN](#) categories.

ID	Name
	Root
1	Enter category name
	Home
2	dress
	Apparel & Accessories > Clothing > Activewear > Dance Dresses, Skirts & Costumes
3	Apparel & Accessories > Clothing > Baby & Toddler Clothing > Baby & Toddler Dresses
	Apparel & Accessories > Clothing > Dresses
	Apparel & Accessories > Clothing > Traditional & Ceremonial Clothing > Religious Ceremonial Clothing

Red arrows indicate the steps: 'Step 1' points to the 'Categories mapping' option in the left sidebar; 'Step 2' points to the 'Google/Facebook EN' dropdown menu; 'Step 3' points to the 'dress' category in the suggestion list.

Open the “Categories mapping” page (step 1) and select partner categories map from the list (step 2). After your store category is a box where you need to enter a partner category (step 3). Enter the first few letters and you will be given a list to choose from. When making changes, do not forget to save the changes (“Update” button).

Make sure that this map is assigned to your XML feed.

## How can I create affiliate prices?

Words "base\_price", "sale\_price", "tax\_price", "shipping\_price", "price\_without\_discount", and "wholesale\_price" will be replaced by the appropriate product value.

Example of a formula:  $\text{sale\_price} - 10, (\text{sale\_price} * 0.1) + \text{sale\_price}, \text{shipping\_price} + 5$

Default carrier ▾

Affiliate price

	Price name	XML name	Formula
<input checked="" type="checkbox"/>	Apple sale	price2	(sale_price * 0.1)+sale_price
<input type="checkbox"/>	Sales Art cat.	price	sale_price-7
<input checked="" type="checkbox"/>	Winter sale	price	sale_price+5

[Another option: add &affiliate=name at the and of the feed URL]

There is another option how to assign prices. You can insert a price name "&affiliate=name" into your XML feed address. Example:

[https://mystore.com/module/xmlfeeds/api?id=29&affiliate=price\\_gb](https://mystore.com/module/xmlfeeds/api?id=29&affiliate=price_gb),

[https://mystore.com/module/xmlfeeds/api?id=29&affiliate\[\]=price\\_gb&affiliate\[\]=winter\\_sale](https://mystore.com/module/xmlfeeds/api?id=29&affiliate[]=price_gb&affiliate[]=winter_sale)

## How can I modify product prices?

You just need to click on an “Edit price” button, then insert the value and select what you want to do with the price. You can edit retail/base price, sale price, sale price tax excl., sale price discount excl., cost / wholesale price, and shipping price. If you need to create a new price, please use the “affiliate price” feature.

### Prices, Tax

Also, you can create a list of products assigned manually. You can select products by name, ID, or category. There are four ways to assign products to a product list:

- Assing by product name or ID
- Assing by categories
- Assing by some part of the product title (Name starts with \*XXX, the name ends with \*XXX, any part of the name). \*XXX \* your phrase.
- Assing by product IDs list separated by commas, example: 5,8,97,45

The screenshot shows a product management interface with a sidebar on the left and a main content area on the right. The sidebar contains various navigation options, including 'Product list' which is highlighted with a red arrow. The main content area has four sections, each with a red arrow pointing to a specific feature:

- Search by product name or ID:** A search bar containing the text 'mug' with a '[Clear]' button next to it. Below the search bar is a list of products: 'Customizable mug #19, Home Accessories', 'Mug The adventure begins #7, Home Accessories', 'Mug Today is a good day #8, Home Accessories', and 'Pack Mug + Framed poster #15, Home Accessories'. A red arrow points to the search bar.
- Search by product category:** A section with a dropdown menu labeled 'Products by category' and a 'Load products' button. A red arrow points to the 'Load products' button.
- Search by product name:** A section with a 'Title element' input field and three radio buttons: 'Name starts with', 'Name ends with', and 'Any part of the name'. A red arrow points to the 'Any part of the name' radio button.
- List by product ID:** A section with a large text input field for entering product IDs. Below the field is a placeholder text: '[Insert product IDs separated by commas, example: 5,8,97,45]'. A red arrow points to the input field.

Make sure that the product list (one or more) is assigned to your XML feed.  
Don't forget to enable this filter. An XML file can have several such filters.

attached files	attached_files	<input type="checkbox"/>

```
<?xml version="1.0" encoding="UTF-8"?>
<rss xmlns:g="http://base.google.com/ns/1.0" version="2.0">
<channel>
  <item>
    <g:id>1</g:id>
    <quantity>155</quantity>
    <minimal_quantity>2</minimal_quantity>
    <g:shipping>
      <g:country>ES</g:country>
      <g:price>5.49 EUR</g:price>
    </g:shipping>
    <g:price>49.87 EUR</g:price>
  </item>
</channel>
</rss>
```

## How to rename product attributes/features when they do not match the partner requirements?

You can rename attribute and function names according to the requirements of your partners. As an example, the size of your clothes are EU standard, but the partner requires a USA standard.

Choose which product parameters you want to rename (step 1, attributes mapping or features mapping). Enter a new value in the field, the current one is displayed at the top (step 3).

The screenshot shows the 'Attributes mapping' interface. On the left sidebar, 'Attributes mapping' is highlighted with a red arrow labeled 'Step 1'. The main panel has a title 'Attributes mapping' with a red arrow labeled 'Step 2' pointing to the 'US size' dropdown menu. Below this, there is a 'Delete the map' button and an 'UPDATE' button. Under the 'Size' section, the current value 'S' is shown, and a new value '10' is entered in the input field, indicated by a red arrow labeled 'Step 3'. Below that, 'M' is shown with '15' entered in the input field.

Also, make sure that attributes or features map is assigned to your XML feed.

The screenshot shows the 'XML Feed settings' interface. On the left sidebar, 'Attributes mapping' is highlighted with a red arrow labeled 'Step 1'. The main panel has a title 'XML Feed settings' with a red arrow labeled 'Step 2' pointing to the 'Fields' section. Under 'Fields', there are several settings: 'Add CDATA' (checked), 'Drop HTML tags' (checked), 'HTML special chars decode' (unchecked), and 'Add "-0" to the product ID' (unchecked). Below these, there are three dropdown menus: 'Category map' (set to 'Google/Facebook EN'), 'Attribute map' (set to 'None'), and 'Feature map' (set to 'None'). A red arrow points to the 'Attribute map' dropdown, which is open, showing 'None' as the selected option and 'US size' as an available option.

## How can I export only certain orders (filter)?

You can filter orders by status, payment method, and date (creation).

Date filters have the following options: export everything, current day, yesterday's, current week, current month, current year, X days from today, and date range (from - to).

The screenshot shows the 'ORDER FEEDS' interface. On the left sidebar, under 'ORDER FEEDS', there is a link 'Orders ALL' with a bar chart icon, which is highlighted by a red arrow. Below it are 'Orders, Ready for PO' and 'Add new feed'. Further down are 'Export customers', 'Export brands', 'Export suppliers', and 'About'. The main area contains several input fields for 'Header rows', 'Footer rows', and 'Extra feed rows', each with a note: '[Make sure that you have entered validate XML code]'. Below these is an 'Encoding' dropdown set to 'UTF-8'. There are three toggle switches: 'Last-Modified header' (off), 'Each item on a new line' (off), and 'Filter by status' (on). Below 'Filter by status' is a link '[Show/Hide status]'. There is also a 'Filter by payments' toggle (on) with a link '[Show/Hide payments]'. At the bottom, there is a 'Filter by date' section with a dropdown menu set to 'Custom days' and a text input '100' followed by 'days from today back'. At the very bottom are two buttons: 'UPDATE' and 'Clear cache'. Three red arrows point from the left sidebar to the main area: one to 'Orders ALL', one to 'Filter by status', and one to 'Filter by date'.

## How to avoid XML escaping special characters (CDATA)?

Sometimes there are characters in the content that are not valid for the XML format, for example, "<" and "&". CDATA sections are used to “block escape” literal text when replacing prohibited characters with entity references is undesirable. CDATA sections can appear inside element content and allow < and & character literals to appear.

## How to display product variants for Skroutz?

Depending on the type of products and needs, Skroutz sometimes requires a specific representation of product variants (combinations). They call it variations.

```
<variations>
  <variation>
    <variationid>1-7</variationid>
    <link>https://mystore.com/en/men/1-7-hummingbird-.html#/4-size-xl/8-color-white</link>
    <availability>Available in store / Delivery 1 to 3 days</availability>
    <manufacturersku/>
    <ean>1432766</ean>
    <price_with_vat>24.75</price_with_vat>
    <Size>XL</Size>
    <quantity>300</quantity>
  </variation>
</variations>
```

In that case, you need to display each combination as a separate product (the “Split by combination” feature), enable the “Skroutz, Display variants” and the “Skroutz, Merge combinations by attributes” feature, and specify the attribute by which the combinations should be combined. This is usually the color, but you can choose according to your needs.

Full instructions with screenshots are shown on the next page.

Skroutz, Merge combinations by attributes

## How to display merged combinations (size, color as an example) for Skrutz?

Depending on the type of products and needs, Skrutz sometimes requires combine product combinations according to a certain parameter. In most cases, it was color, but you can choose according to your needs.

```
<products>
  <created_at>2024-04-26 14:45:05</created_at>
  <product>
    <manufacturer>Studio Design</manufacturer>
    <id>1-1</id>
    <mpn>demo_1_v1</mpn>
    <ean>1432766</ean>
    <availability>Available in store / Delivery 1 to 3 days</availability>
    <name><![CDATA[ Hummingbird printed t-shirt Size S Color White ]]></name>
    <image>https://mystore.com/2-large_default/hummingbird-printed-t-shirt.jpg</image>
    <link>https://mystore.com/en/men/1-1-hummingbird.html#/1-size-s/8-color-white</link>
    <price_with_vat>24.75</price_with_vat>
    <InStock>Y</InStock>
    <category>Clothes > Men</category>
    <Size>XL,M,S</Size>
    <Color>White</Color>
  </product>
</products>
```

In that case, you need to display each combination as a separate product (the “Split by combination” feature), enable the “Skrutz, Merge combinations by attributes” feature, and specify the attribute by which the combinations should be combined. This is usually the color, but you can choose according to your needs.

Full instructions with screenshots are shown on the next page.
