Ceneo Marketplace (Buy Now)
Prestashop Module

CENEO

Functional scope of the module:

Ceneo Marketplace is the opportunity for stores to gain sales directly in Ceneo.pl. The transaction is concluded on the Ceneo site, and the data necessary to complete the order are transferred to the store (the subject of the transaction, shipping data, etc.).

The plug-in provides:

- communication of PrestaShop store with the database of transactions in Ceneo,
- visibility of transactions from the PrestaShop panel level,
- automatic updating of inventory in the store.

Only transactions with a status 30 - paid are downloaded to PrestaShop.

Transaction data delivered to PrestaShop from Ceneo:

- Order number;
- Quantity, price of products;
- Order value;
- Shipping costs;
- Shipping data;
- Invoice data;
- Date of order;
- Form of delivery in the form of an additional text field;
- Form of payment;
- Note from the user.

In turn, PrestaShop transmits to Ceneo the number of the order generated in the store.
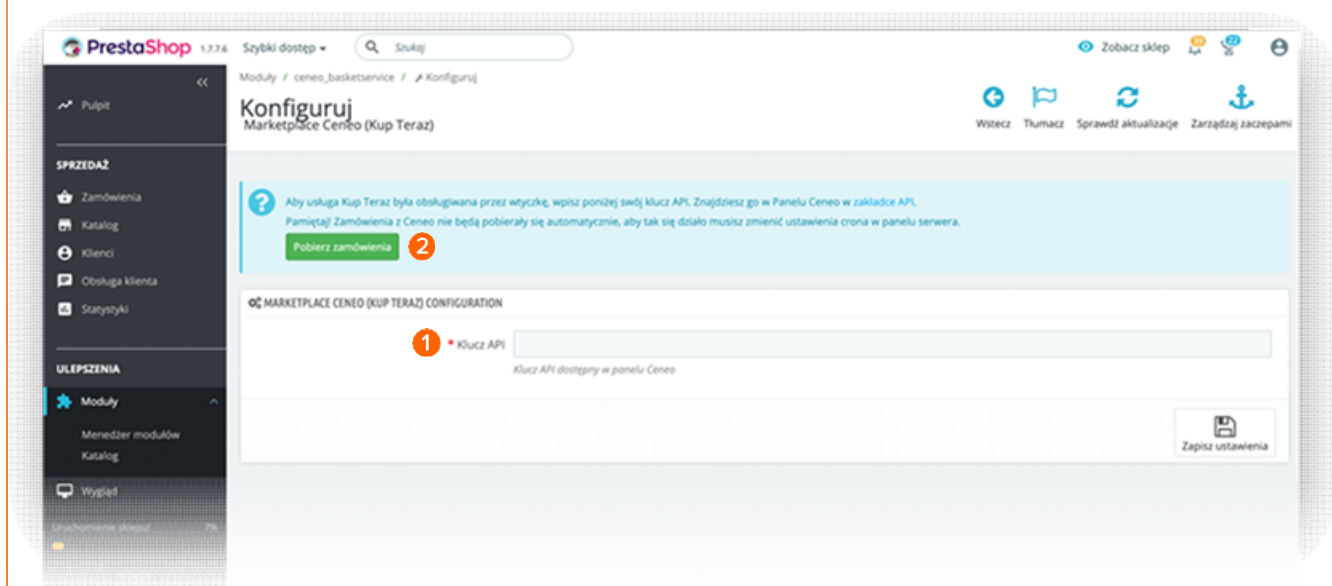

Module installation

Store panel: Enhancements -> Modules -> Module Manager.

1 In this view on the top right, click the "Load Module" button and point to the previously downloaded ceneo_basketservice.zip file.

After installing the module, proceed to its configuration.

Configuration and functioning of the module

❶ In the module configuration, you need to enter the API key available in the Ceneo panel.

❷ To download new orders, click the green "Download orders" button. You can also set a cron task on the server.

During installation, the plug-in adds a new order status "New unhandled". This status will be assigned to orders generated in Prestashop.

Changes in order status (in progress, shipped, cancelled) in PrestaShop will trigger changes to the order statuses in the Ceneo panel as well.
